

Slash Tire Expenses Up To 25% Or More - GUARANTEED!

Face it. Whether you manage ten vehicles or ten thousand, tire expenses are a huge part of your budget. Now you can cut those expenses up to 25% or more using Ride-On TPS. GUARANTEED!

Ride-On TPS is a revolutionary product that makes any tire into a self-sealing tire. While you drive, the gel-like product evenly coats the inner surface of your tire. The coating helps eliminate chronic air leaks, balances the tire, reduces the operating temperature of the tire and instantly seals punctures up to 1/4" in diameter using fibers that are six times stronger than steel. One application of Ride-On will last for the life of your tires. The result: your tire expenses are dramatically cut using Ride-On.

It's as Easy as **A, B, C, D**

Air Pressure -

Ride-On TPS helps eliminate porosity leaks that cause tires to naturally deflate over time. Properly inflated tires run cooler, last longer, and help improve your vehicle's fuel economy! Independent fleet tests have proven that tires containing Ride-On maintain their set point pressures up to **500%** better than untreated tires.

Balance Tires -

Ride-On TPS Commercial High Speed (CHS) formula helps hydrodynamically balance medium to heavy truck tires. Ride-On outperforms traditional lead weights that tend to fall off. Once Ride-On is installed in a tire, it will dynamically act to dampen vibrations for the life of the tire so you do not need periodic rebalancing. And Ride-On won't clump up or clog valve stems like powder balancers will.

Cooler Tires -

Tires that are properly inflated and balanced run cooler and last longer. Less flexing, bounce and fatigue means cooler tires and enhanced casing life - up to **25%** or more!

Decrease Downtime -

Ride-On TPS makes any tire into a self-sealing tire. By eliminating **85-95%** of flat tires due to punctures in the crown of a tire, we can keep your fleet running, reduce costly road service calls, and eliminate run-flats.

"After pulling off a tire, I was amazed to find 5 nails, 2 screws, and a piece of limestone rock that had penetrated the tread. The tire had continued to hold air and stayed in operation until the tread was completely worn out." Mike Smalley, Smalley's Sanitation Service

"To date, the tires that were treated with Ride-On have stayed at the pressure we initially aired them up to, plus or minus 1-2 psi, for over 9 months. Additionally, we did some tire temperature tests with our infrared temperature gun and noticed a 30-degree difference in tires with Ride-On installed, compared to those without Ride-On. Overall we have extended the life of our steer tires from 150,000 miles to 180,000 miles. Your product works exactly as your company claims." Roger Gustin, Ronco Leasing, LLC

"As of January 1, 2002, the installation of Ride-On TPS was mandated in all tires mounted on the City of Baltimore vehicles. The City of Baltimore currently operates more than 5500 pieces of equipment." Charles Krysiak, Fleet Administrator - City of Baltimore
