Falls Church, VA 22043

Dear Mr. Farkhan,

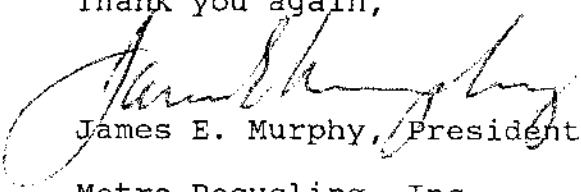

We have been in the Solid Waste and Recycling businesses for over 18 years. I have been approached by many salesmen with various gimmicks that are designed to save me money, but end up costing far more. Our fleet of 25 trucks run in various conditions and circumstances, either on the road with maximum weight and at highway speeds, or off the road into Landfills where the perils abound.

Prior to the installation of your product, we suffered several flat tires per day due to punctures. Often these punctures would result in the failure of another tire mounted next to the one that was punctured. Our casings were not repairable or recappable most of the times as well.

I wish to thank you and your staff for the introduction to the Ride-On Tire Protection System. Since the initial product installation, we have cut our flat repairs by over 600 %, from over 10 per week to less than 6 per month. The Ride-On Tire Protection System has virtually eliminated downtime due to slow leaks as well, especially good in trailer applications.

In retrospect, had I believed in the beginning what I know to be true now, I would have saved myself thousands of dollars in repairs and hundreds of man-hours in downtime. This product has changed our business operation by eliminating a major worry. FLAT TIRES !

Thank you again,

James E. Murphy, President

Metro Recycling, Inc.
