Dear Mark:

We were first introduced to the Ride-On Tire Protections System tire sealant at the 1998 WasteCon show in Charlotte, NC. We decided to try your product in our Caterpillar backhoe that operates in our "Slash Yard". This part of the landfill represents our most severe service as it contains everything from tree limbs, construction debris, and an abundance of nails and screws.

Prior to using your product, we were averaging 2 flat tires per week. Ride-On has performed better than what you promised and frankly I am quite amazed. We have had NO FLAT TIRES due to punctures over a 24-month period. None.

We are going to order Ride-On TPS for our new CAT Backhoe, and based on my experience over the last 2 years, I would recommend your product to any landfill operator or business that wants to cut down on its downtime and flat tire expenses. Your product has paid for itself many times over.

Thanks again for introducing us to your product.

Sincerely,

Marvin Sheriff
Director of Public Works
